DEKTON® & SILESTONE®, RECYCLABLE PRODUCTS

Our products can be completely recycled when they are installed using mechanical anchors, as in the case of ventilated façades for example, or with dry joint construction (mechanical fastening without the use of adhesives or mortars). In these cases, both DEKTON® and SILESTONE® products are reusable as they have a useful life of 50 years.

In case of other types of placements that do not make it possible to recover the material, the waste generated is classified as inert, and can be 100 % reused in other uses such as aggregate for construction, manufacture of concrete, gravel, etc.

In terms of packaging waste, the amount of waste generated on site per year and type of waste is:

TYPE OF PACKAGING	QUANTITY (Ton)
PLASTIC	2,773
PAPER AND CARDBOARD	204
WOOD	3,737

(*) Based on 2021 data.
