

SHO100/SHO100-T/SHO101-T5

Outdoor Humidity/Temperature Sensors

Product Description

This range of outdoor humidity/temperature sensors is designed to provide relative humidity measurement and temperature sensing outdoors or in indoor areas where a more robust design is required (e.g. warehouses, swimming pools).

Each of these devices is an active sensor, which measures the relative humidity (%RH) and converts the measurement into an electric current (4 ... 20 mA) or a voltage level (0 ... 10 V).

Models are available with humidity sensing only or humidity sensing combined with temperature sensing using NTC thermistors.

The humidity sensor comprises a sensing element fitted at the end of a short probe and an amplifier mounted in the main housing.

The SHO100-T has two different, user-selectable passive NTC temperature elements: NTC 1.8 k Ω (Vista), and NTC 10 k Ω (I/NET).

The SHO101-T5 has two different, user-selectable passive NTC temperature elements: NTC 1.8 k Ω (Vista), and NTC 10 k Ω (Continuum).
